

SUBC3Dx

INTRODUCING THE ARV-*i*

The Vision and the possibilities

Introduction ARV-i

Finished product - live

- Measurement system in Fishnet
- Autonomous mission to take pictures of fish
- Processing photos in the dock
 - *Lice count*
 - Biomass
- Result direct visible in webapp
- Acoustic communication between dock/drone

Finished product - live

SUBC3D

Participating in the RSP project

Renewables for Subsea Power

The Project

The Renewables for Subsea Power (RSP) system consists of Mocean Energy's Blue X wave energy converter, EC-OG's Halo subsea energy storage and communications gateway, Modus's residential Hybrid AUV and a subsea production control system from Baker Hughes. Part-funded by OCTC, the system will be built and ready for offshore tests in 2022.

- **Phase 1** – FEED 2020 (complete)
- **Phase 2** – Onshore Testing H1 2021
- **Phase 3** – Offshore Testing H1 2022
- **Ready for commercial use H2 2022**

Renewables for Subsea Power

The RSP System

The RSP system combines renewable energy from ocean waves with subsea energy storage and over-the-horizon communications to a reliable and continuous supply of power and a wireless communication link for remote, standalone and autonomous subsea systems.

Scalable to support peak loads of up to 10 kW, suitable for the majority of North Sea subsea production assets.

Zero GHG emissions from power production.

Applications include:

- Fixing brownfield power distribution problems
- Residential AUVs/ROVs
- Long step outs and marginal developments
- Sensors and monitoring

blueX

Nominal Power	10 kW
Energy Storage	33 kWh
Communications	4G, VHF, Wi-Fi
Dimensions	19.3m(L) x 7.6m(H) x 4.6m(D)
Total Mass	38 Te

Halo

Energy Capacity	150 kWh (scalable to 1 MWh+)
Output A (SPCS)	250 VAC 1PH 50 Hz (configurable)
Output B (HAUV)	350 VDC, 3 kW
Dimensions	4m(L) x 2.9m(W) x 2.5m(H)
Total Mass	10 Te

Battery capacity: 600 Wh
Endurance: ~4 hours
Range: ~8 km
ARV-i Drone Dimensions: 0.61m(L) x 0.4m(W) x 0.36m(H)
Dock Dimensions 1.2m(L) x 1.25m(W) x 0.7m(H)

ARV-*i* in open water, autonomously
flying to the object for inspection

To Launch, drop into the water

ARV-*i* areas of use

24/7

How can the ARV-*i*
realize your resident
underwater
ambitions?

ARV-*i* to enable

- Cost effective Vessel-free inspection and light intervention
- Reduction of Carbon footprint
- More accurate and frequent data collection
 - Sensor reading and charging
 - Enabler of digital transformation of Subsea

Leakage Detection

(Floating) Offshore Wind

3D Reconstruction

GVI/CVI

Riser Tracking

CP Survey

Endless benefits of using an autonomous
resident underwater Drone
